

Accelerate Clinical Trial Recruitment With Real-Time, High-Fidelity Data

Recent enhancements to Komodo's Healthcare Map™ increase the power of Pulse — our clinical alerting software

1 Race and Ethnicity Insights for 225 Million Patients

2 150 Provider-Complete Oncology Datasets

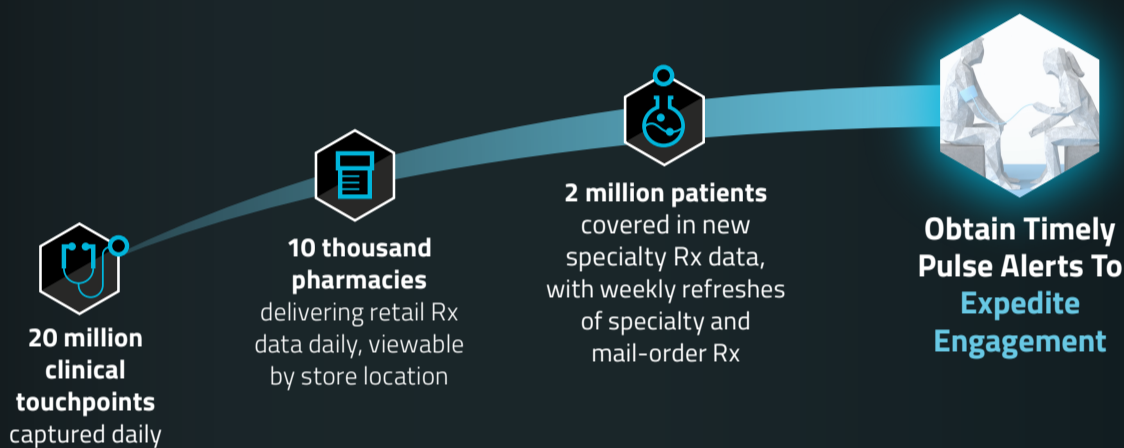

3 Retail Rx for 100+ Million Patients and Specialty Rx for 2 Million

To meet recruitment goals and timelines, your teams need to accurately surface as many patients as possible who meet your protocol's criteria.

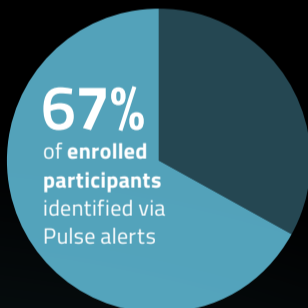

Now, you can see more demographics and billions of additional Mx and Rx encounters, enabling you to maximize the pool of potential trial participants.

What's More...

Our data is continuously refreshed, so in addition to seeing a larger population of patients, you can also identify *new* patients as soon as they become eligible for screening:

Pulse Alerts in Action

Clinical Trial Time Frame Accelerated by 10 Months

A leading biotech company launched a rare disease clinical trial during the pandemic using Pulse alerts to identify patients near existing trial sites.

- Pulse delivered 110 leads
- The customer received a 50% response rate, despite being restricted to email outreach
- 60% of these providers confirmed their patients were screening eligible

Patient Screening Increased 130% Within Days

Recruitment challenges delayed a biopharma company's multiple myeloma clinical trial for more than a year.

- Pulse alerts were configured to patient-cohort specificity using key inclusion/exclusion criteria
- A unique auto-mapping feature searched within 50 miles of the nearest existing site
- Within days, 20 screening-eligible patients were confirmed within 30 miles, a 130% increase over the number of patients identified the entire previous year

With new data enhancements to Komodo's Healthcare Map, Pulse is even better positioned to find screening-eligible patients quickly, often before a diagnosis, relapse, or a therapy switch occurs. A foundation of Mx and Rx data for 330 million patients with an average of 7 years of longitudinal history — when combined with daily data refreshes — ensures you have access to the industry's most comprehensive, up-to-date source for patient analytics.
